Raffaello

MEGALINE

Available with one or two coffee brewing groups.

Boiler capacities of 8 liter (one group machine) or 14 liter (two group machine) guarantee huge hot water and steam capacities, combined to great coffee output.

Only the best materials have been utilized, paying particular attention to the components which come into direct contact with water and coffee.

The thermosyphon circulation system is optimized and characterized by the over-sizing of the components.

Other product features are the super-reduced width (one group machine 44 cm = 17.3" and two group machine 59 cm = 23.2") and **the possibility to set the drip tray at two different levels to facilitate the use of "jumbo" cups as well as small Italian style espresso cups.**

1
All panelwork is metal made.

2
Hot water spout. Hot water feature comes with water tempering valve (special order). This feature prevents dangerous hot water sprays and simultaneously maintains the correct hot water temperature for tea and americanos. This feature also increases the steam output by up to 35%.

3
Touch pad (electromechanical): 1 button for semi-automatic brewing, 4 buttons for automatic coffee portion control, 1 button for automatic hot water portion control.

4
Extra high boiler capacity. Standard is 14 litre on two group and 8 litre on 1 group machines. All commercial ECM machines come exclusively with a generously dimensioned thermosyphon system.

5
Two high quality steam valve / wand assemblies.

6
Dual pressure gauge for boiler and pump pressure.

7
High quality espresso brewing group. On special order: ECM's patented TAGH system for precise and easy temperature setting for each individual coffee brewing group.

8
Drip tray can be positioned to two different levels: this allows use both of typical Italian espresso cups up to extra-tall 24 oz. cups.
